# **SHIZUKU (GCOM-W1) to Provide Geophysical Quantity Products**

May 17, 2013 (JST)  
Japan Aerospace Exploration Agency (JAXA)

The Japan Aerospace Exploration Agency (JAXA) has started offering eight kinds of products whose physical quantity concerning water on the Earth, including precipitable water and sea surface temperature, is calculated based on the observation data acquired by the Advanced Microwave Scanning Radiometer 2 (AMSR2) aboard the Global Change Observation Mission 1st – Water “SHIZUKU” (GCOM-W1) after its initial calibration operation\*1 was completed. The SHIZUKU was launched on May 18, 2012. These products will contribute to capture environmental changes on a global scale such as worrisome decreasing ocean ice areas in the North Pole as well as the El Nino and La Nina Phenomena. The products can also be utilized for various fields including weather and precipitation forecasts for storms and downpours by global meteorological agencies such as the Japan Meteorological Agency and the National Oceanic and Atmospheric Administration (NOAA) of the U.S., compiling fishing and oceanographic conditions for efficiently finding fishing points by the Japan Fisheries Information Service Center, and enhancing measures against floods in Asian countries that engage in a cooperative project with the Asian Development Bank.

\*1 Calibration operation: To improve accuracy, Earth physical quantity acquired through data obtained by the SHIZUKU, including precipitable water and ocean surface temperature, are compared with data acquired through other independent methods such as observations on the ground.

[How to receive data]

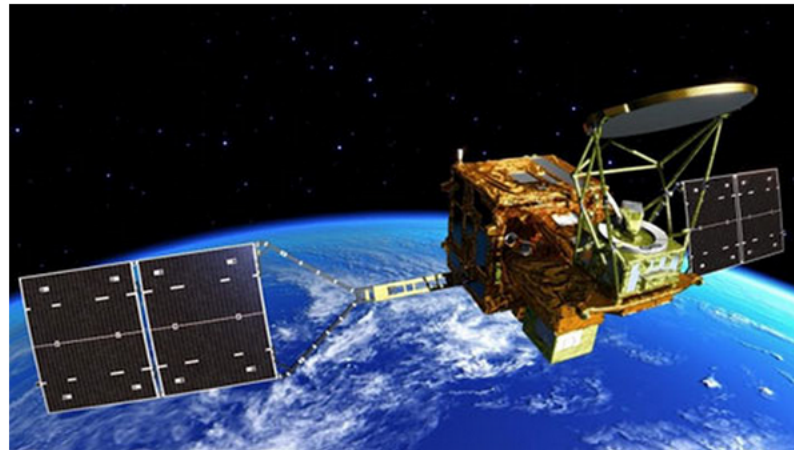

Please register at the following SHIZUKU data provision website:

<https://gcom-w1.jaxa.jp>

After registering, you can download brightness temperature products.

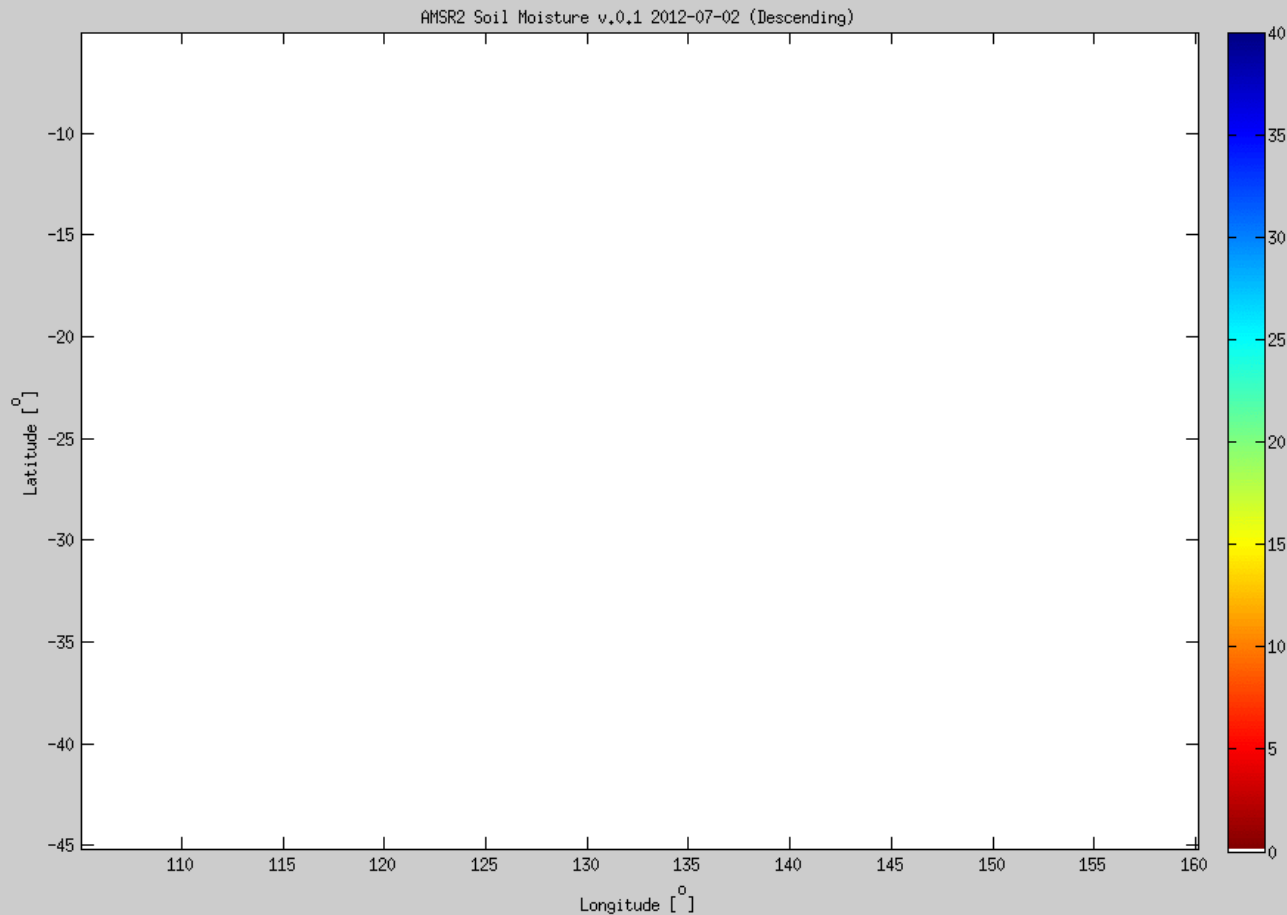

We began providing brightness temperature products on January 25, 2013 at the following website.

towards global water and energy balance monitoring using GCOM-W1  
in the Australian Murray Darling Basin

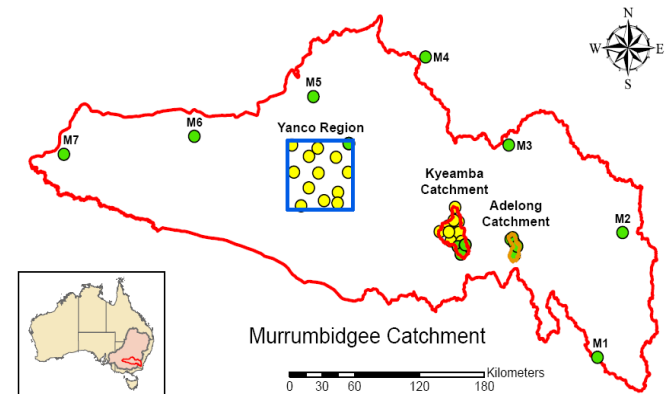

# AMSR2 Soil Moisture Product v0.1

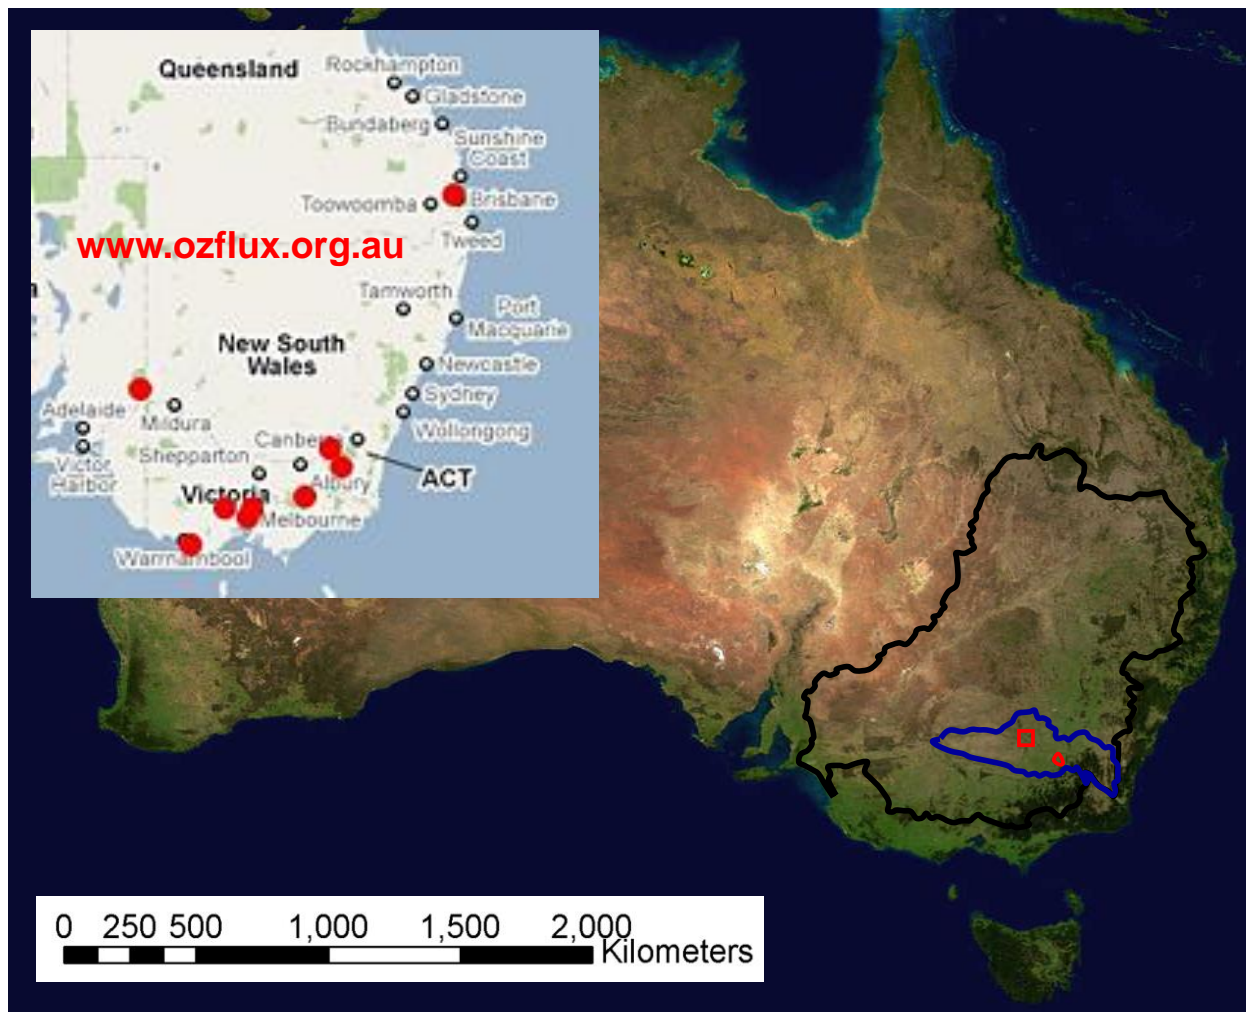

# Project Overview

Undertake **validation of AMSR2 soil moisture observations and downscaled products** in the Murray Darling Basin of Australia, and their subsequent **use in land surface data assimilation systems**.

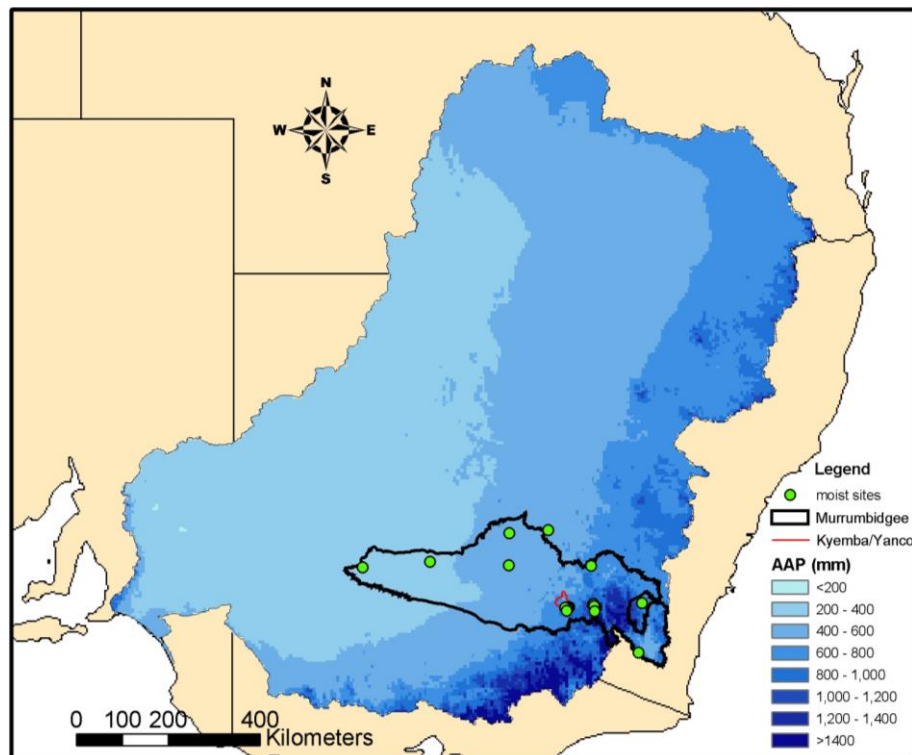

# The Murray Darling Basin

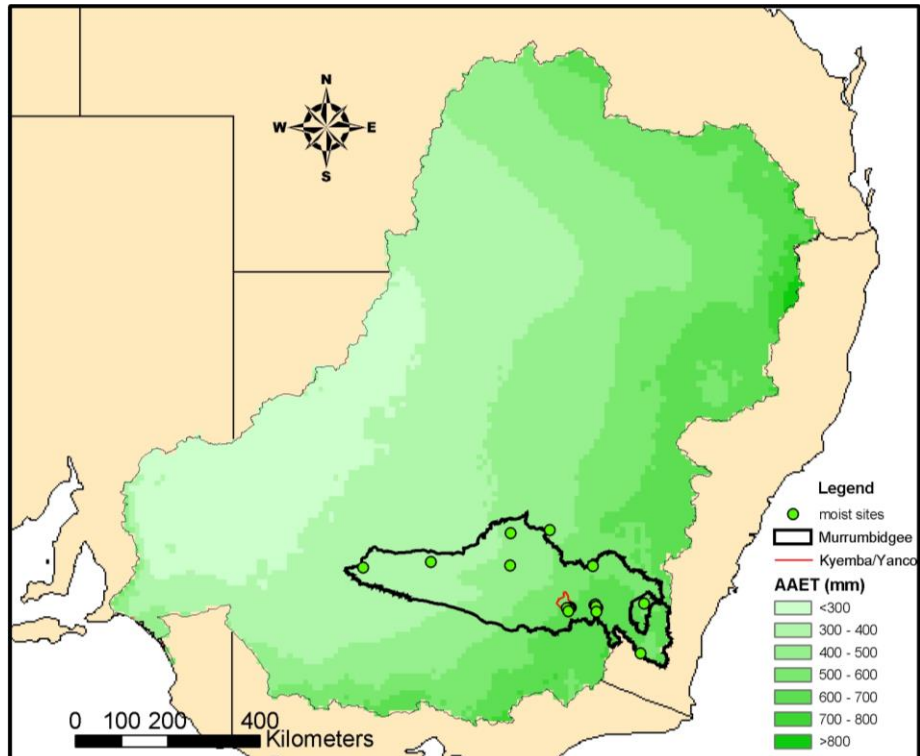

# Precipitation and Evapotranspiration

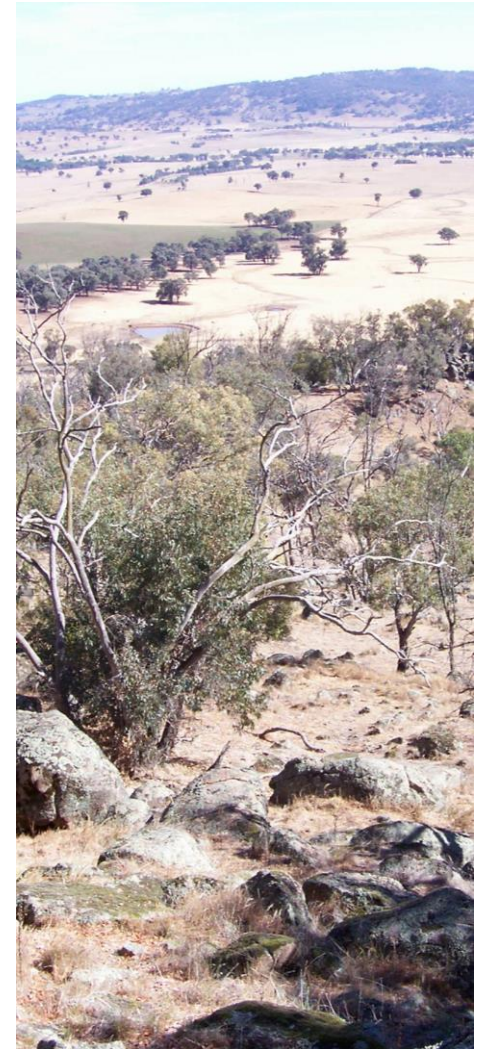

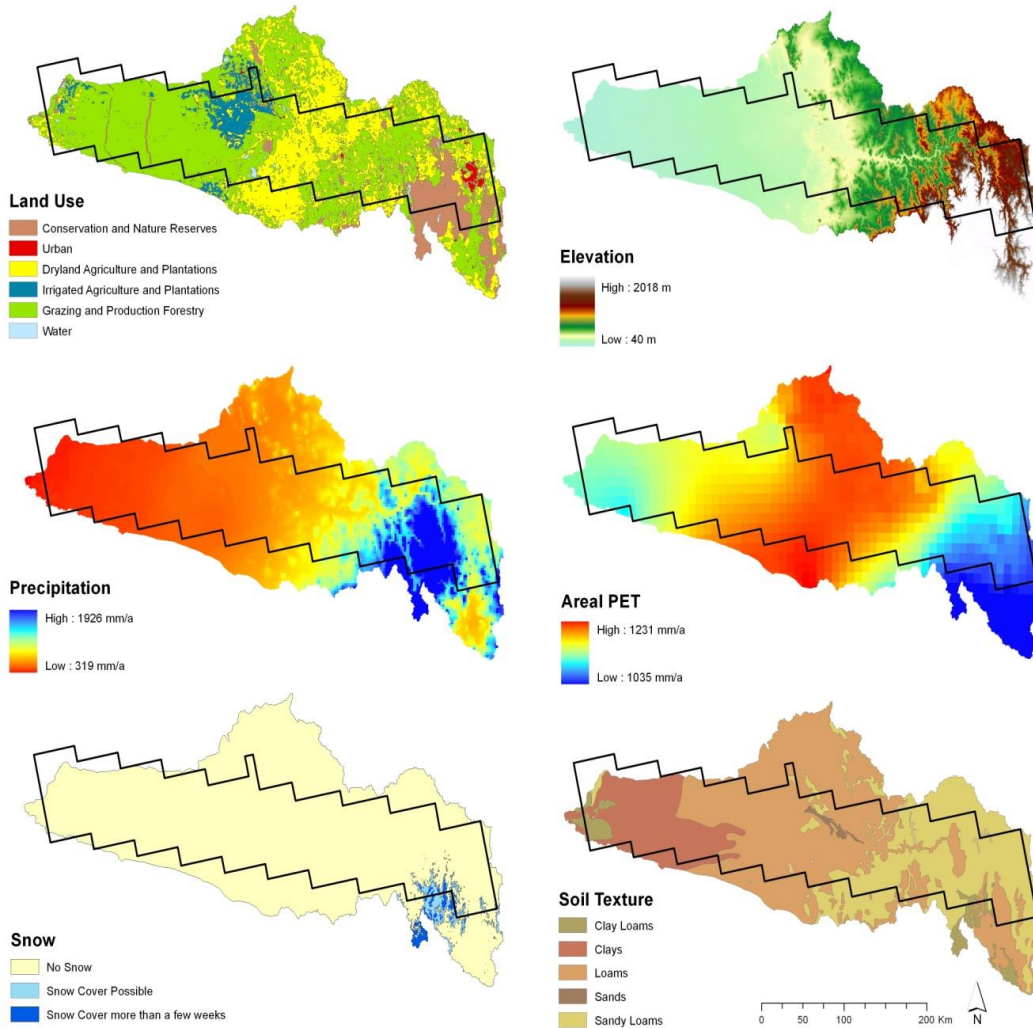

Average Annual Precipitation (mm)

Annual Actual Evapotranspiration (mm)

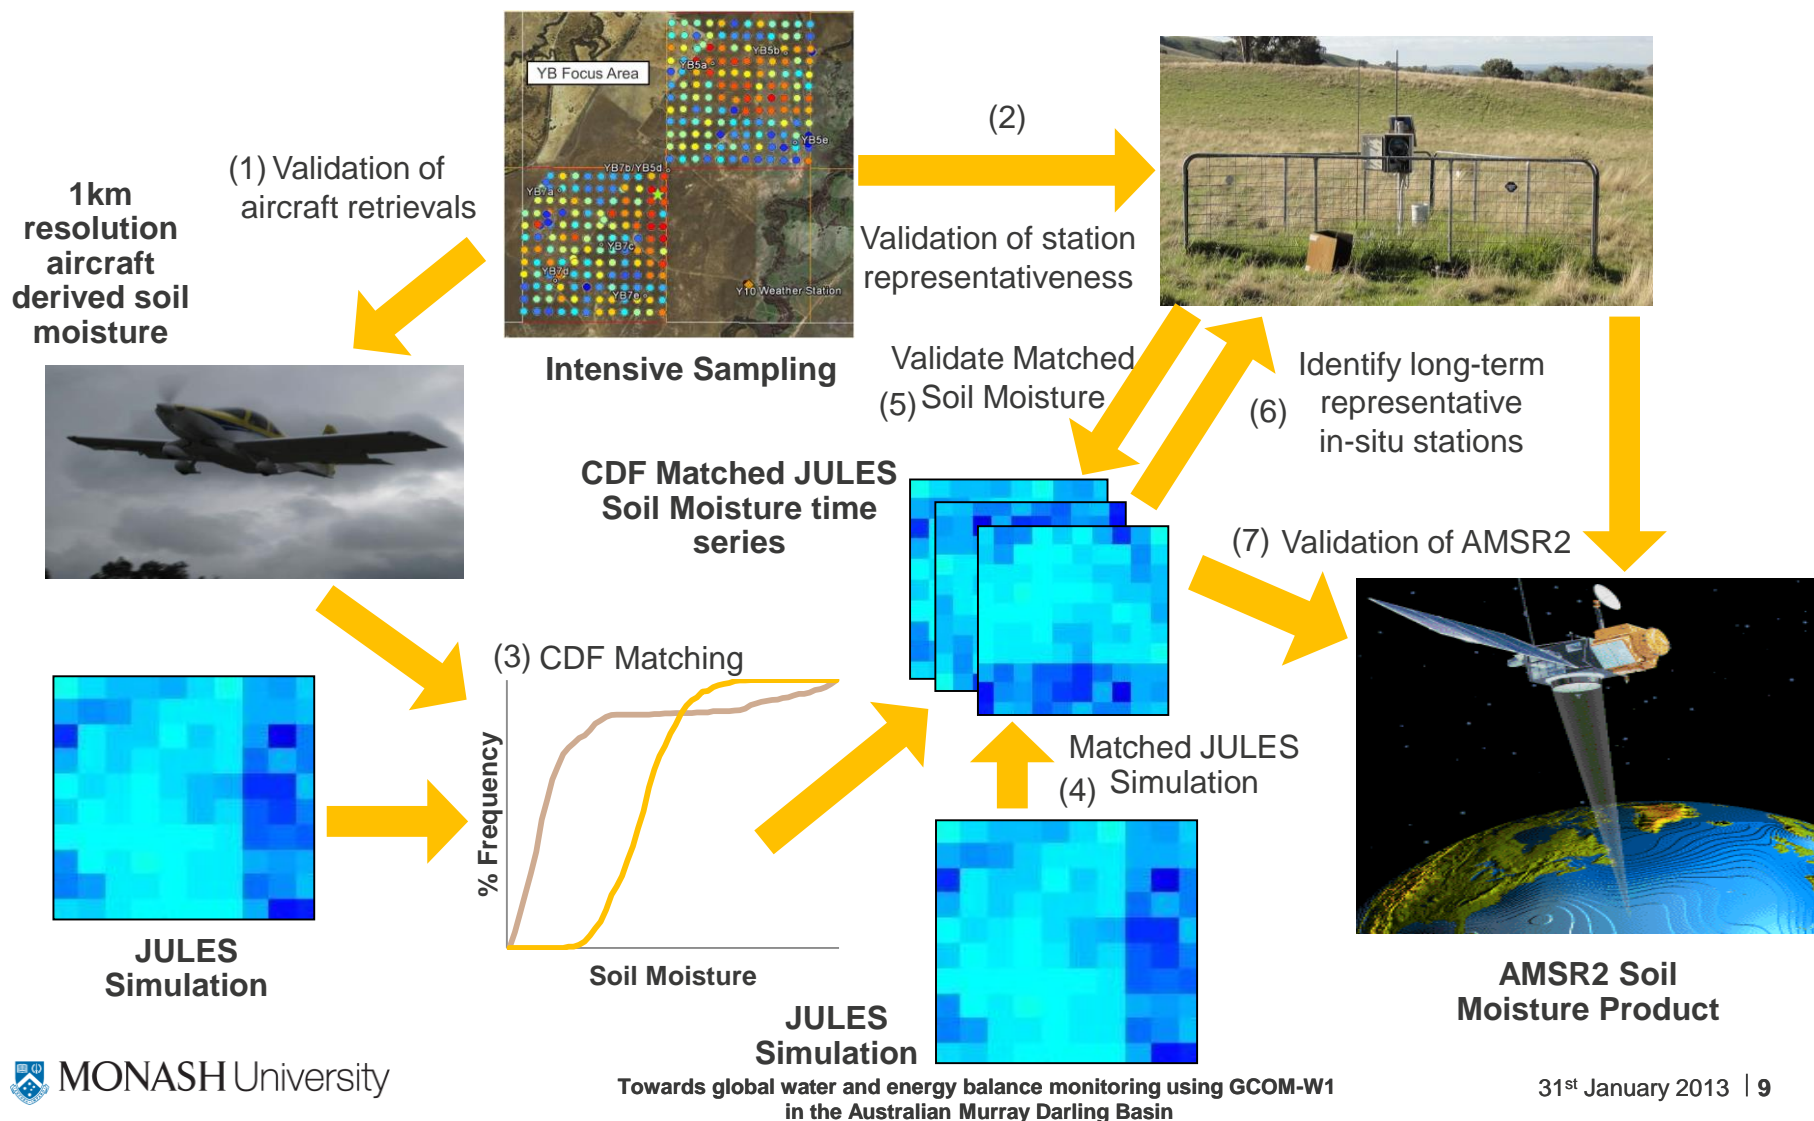

# Catchment characteristics

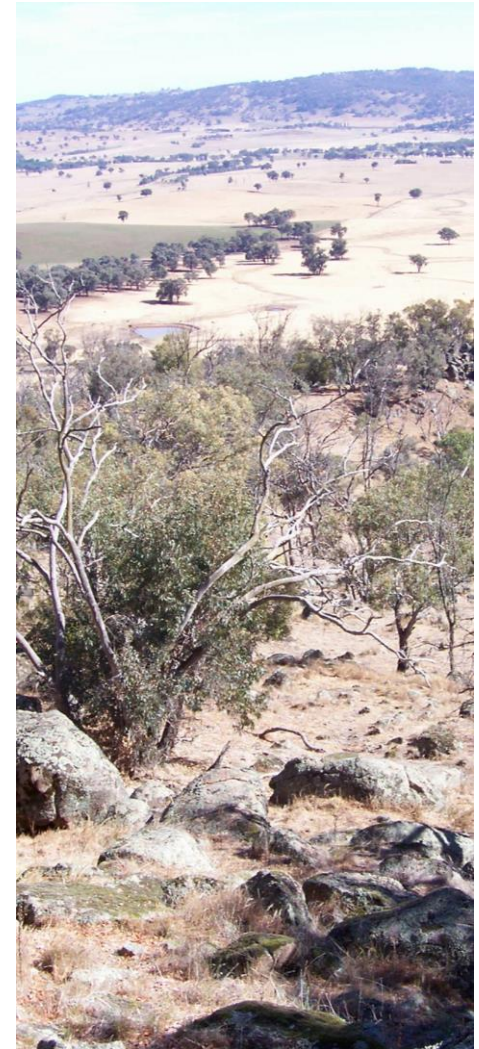

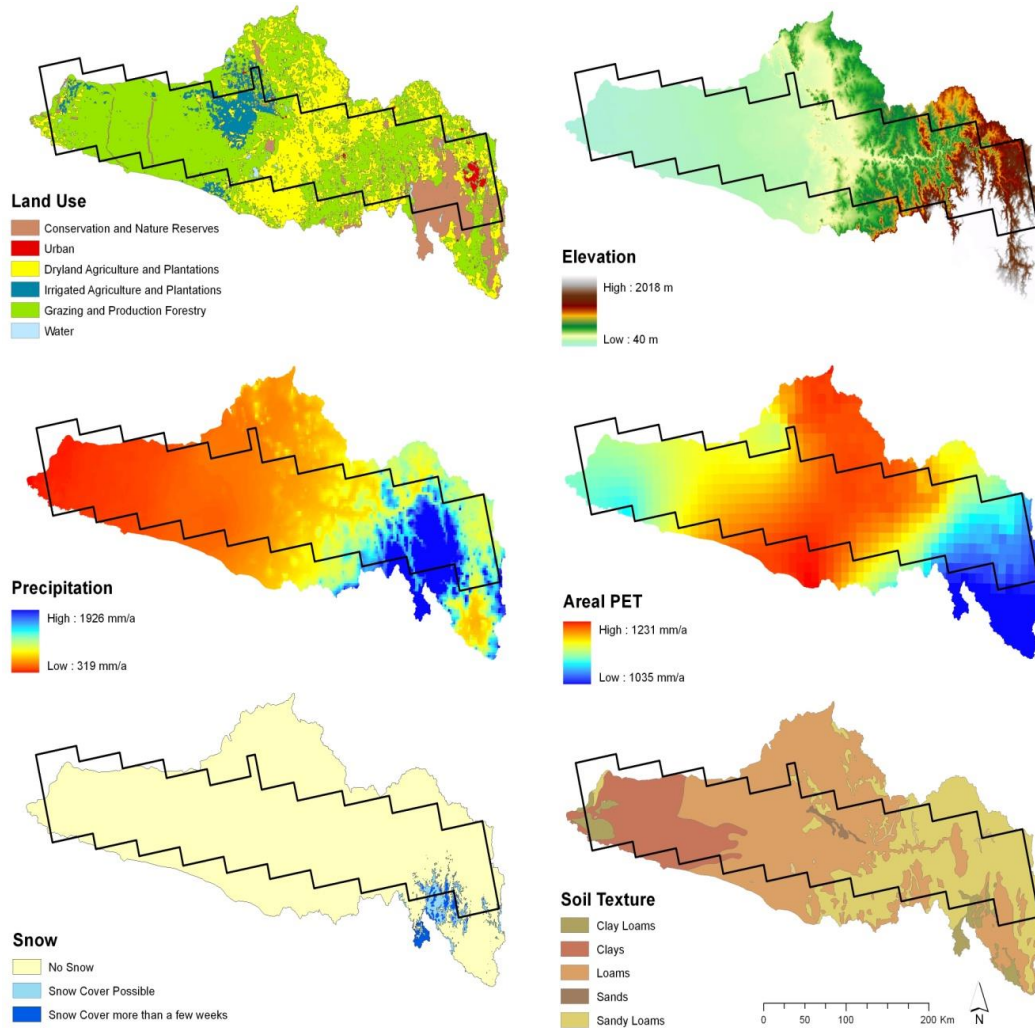

# Specific Objectives

1. Install and maintain a flux validation tower in addition to soil moisture
2. Validate AMSR2 soil moisture products
  - understanding the point-to-pixel scaling of the study site
  - comparison between time series station data and AMSR2
  - *comparison between model predictions and AMSR2*
3. Validate derived root-zone soil moisture AND land surface fluxes
  - official products
  - in-house studies

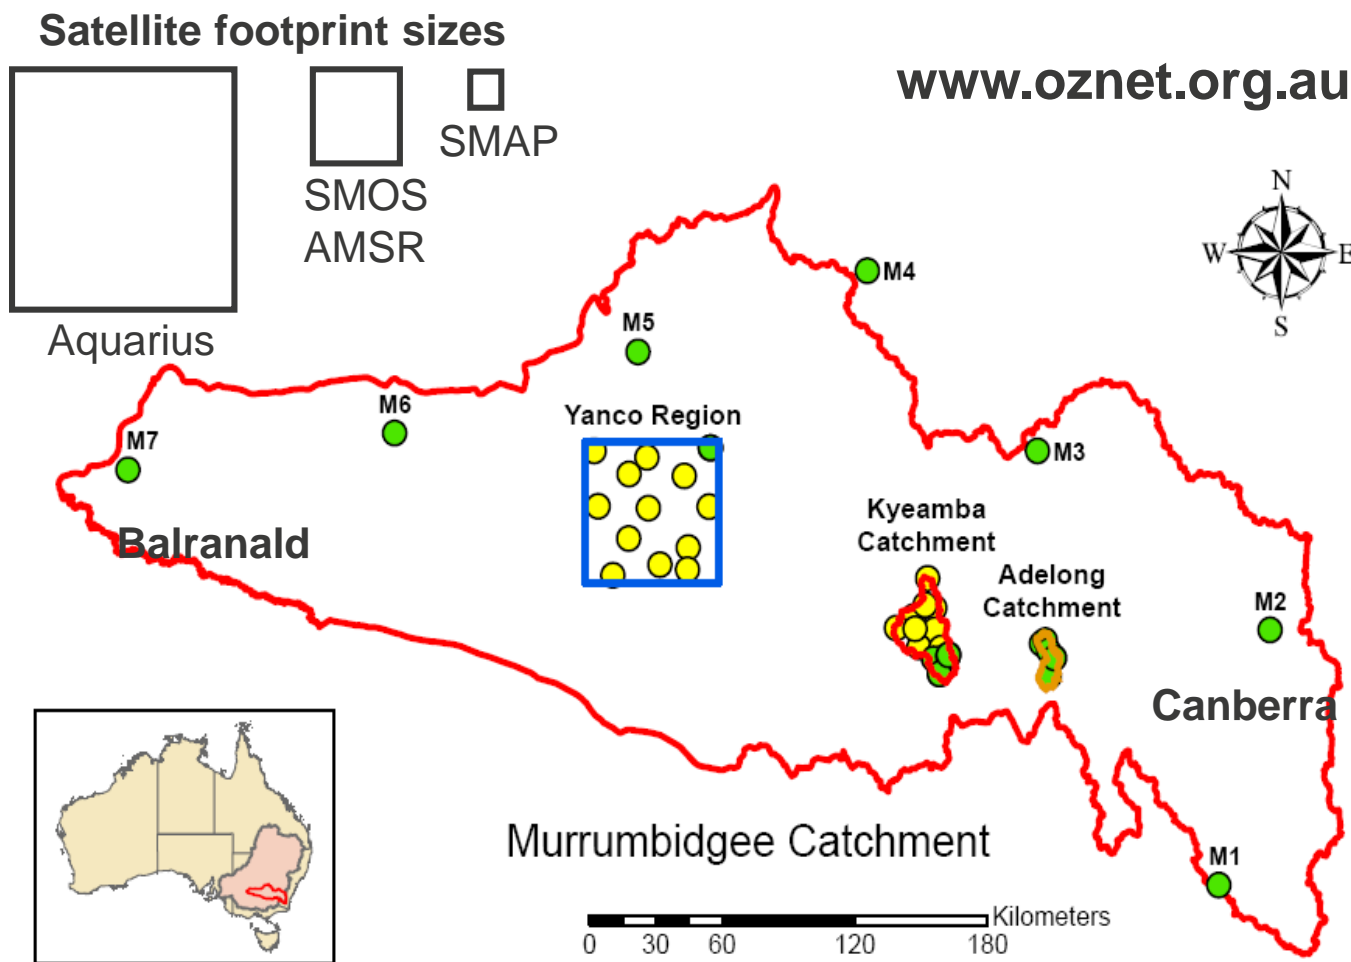

# Upscaling Plan for Validation of AMSR2

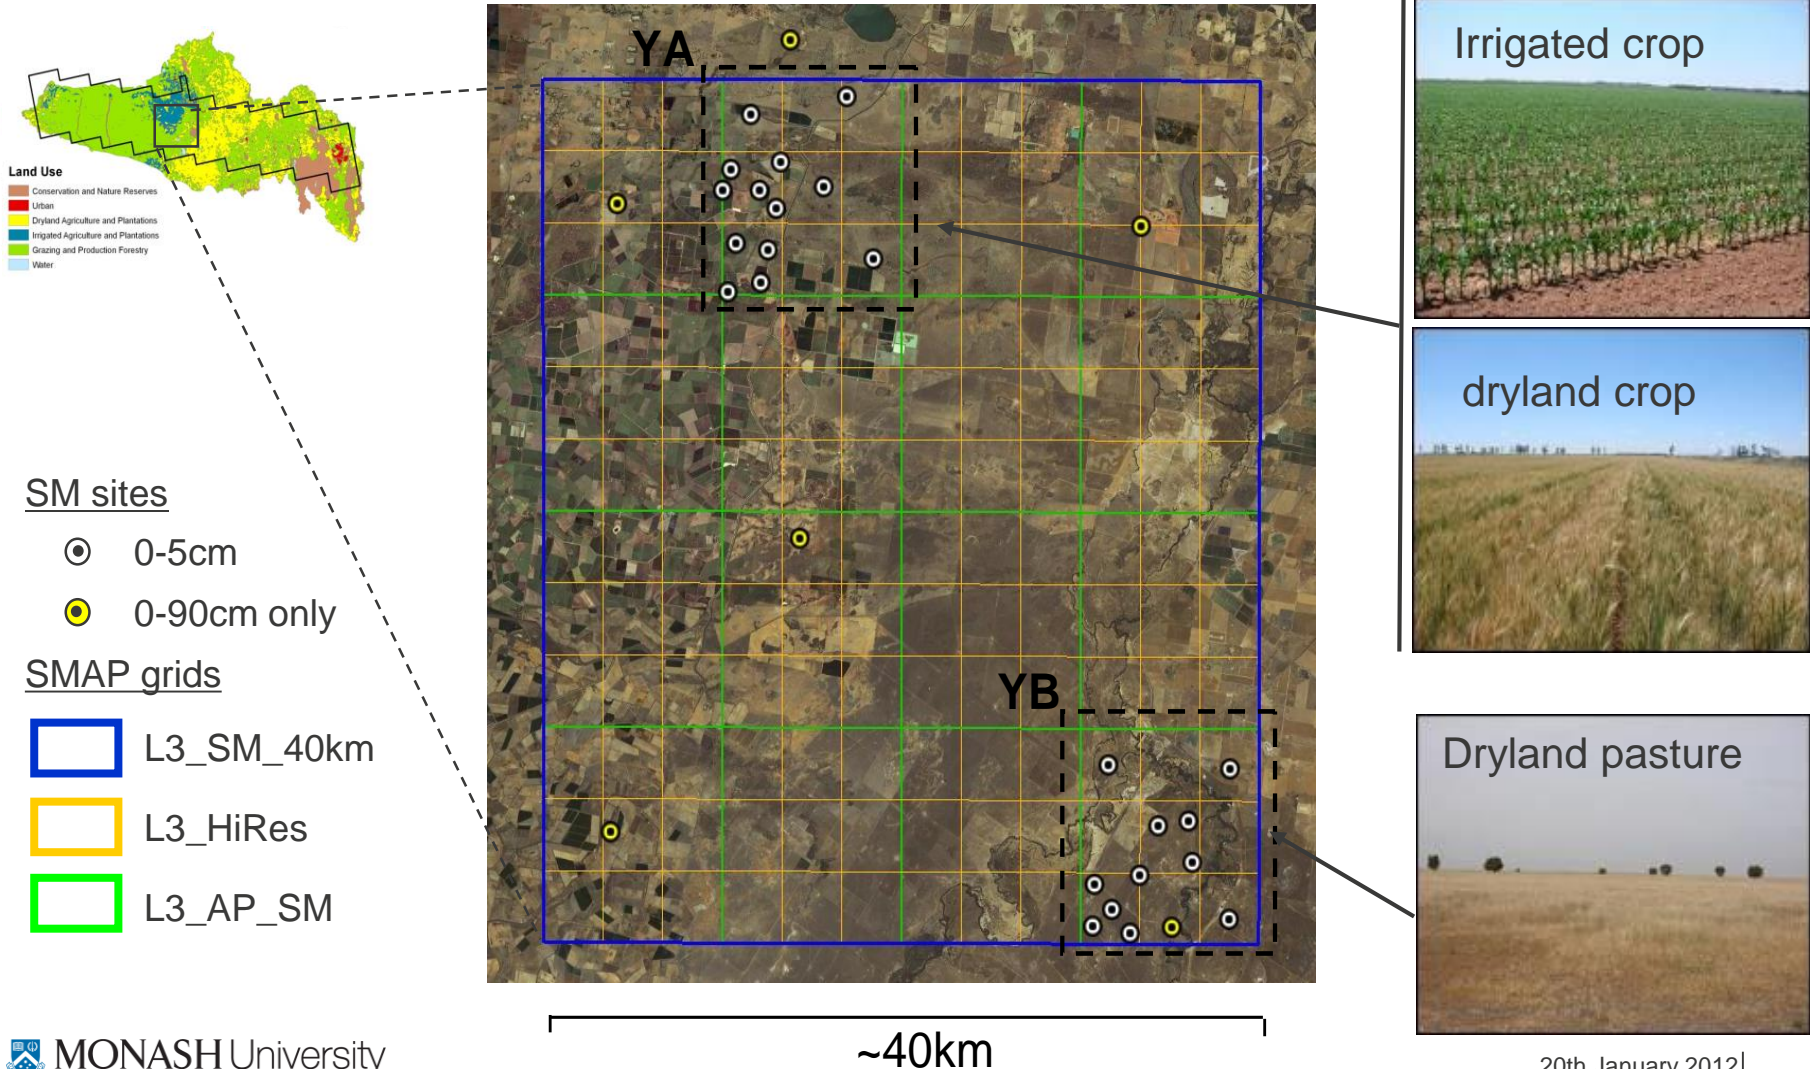

# Catchment characteristics

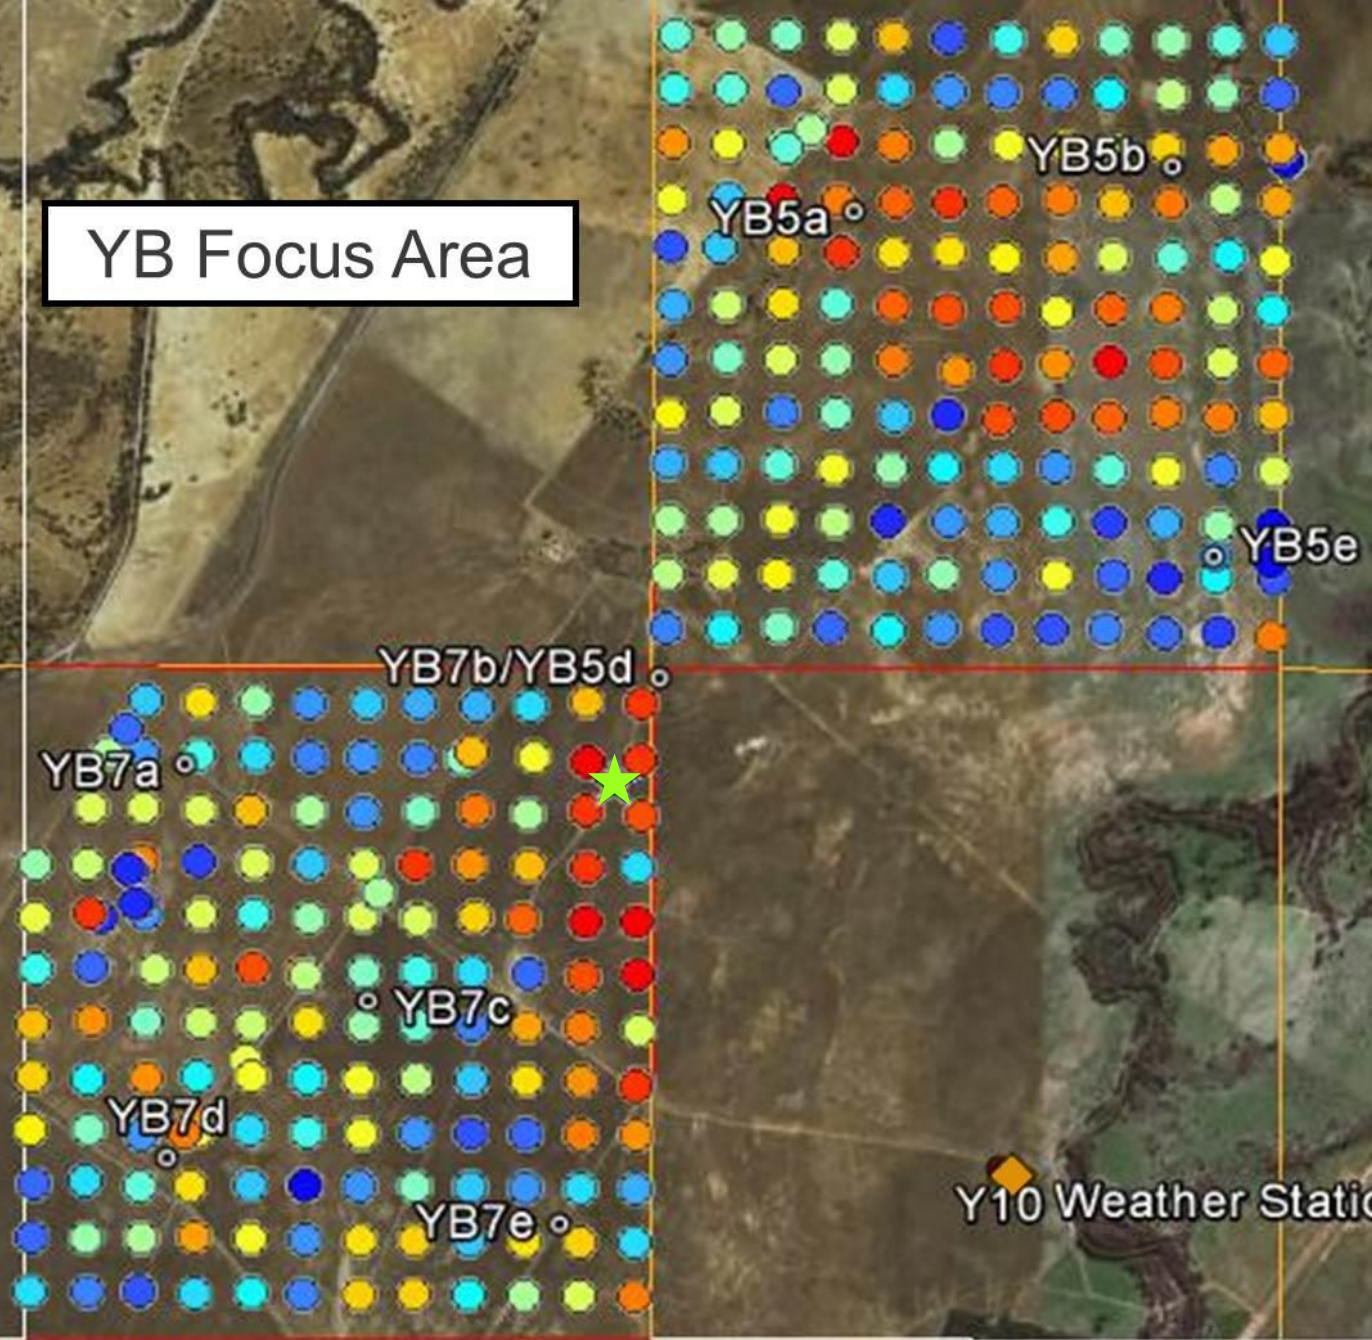

# A ground based soil moisture observatory

# The SMAP test-bed (core validation site)

## YB Focus Area

### Legend

-  AMSR2 50km "grid"
-  AMSR2 25km grid
-  AMSR2 10km grid
-  OzNet Monitoring station
-  Intensive Monitoring Area
-  SMAPEX Monitoring station
-  JAXA Station
-  Weather Station

# SMAP simulator

L-band radiometer (PLMR)

6 x Vis/NIR/SWIR/TIR

L-band radar (PLIS)

## **PLMR: Polarimetric L-band Multibeam Radiometer**

Frequency/bandwidth: 1.413GHz/24MHz

Polarisations: V and H

Resolution: ~1km at 10,000ft flying height,

Incidence angles:  $\pm 7^\circ$ ,  $\pm 21.5^\circ$ ,  $\pm 38.5^\circ$  across track

Antenna type:  $8 \times 8$  patch array

## **PLIS: Polarimetric L-band Imaging SAR**

Frequency/bandwidth: 1.26GHz/30MHz

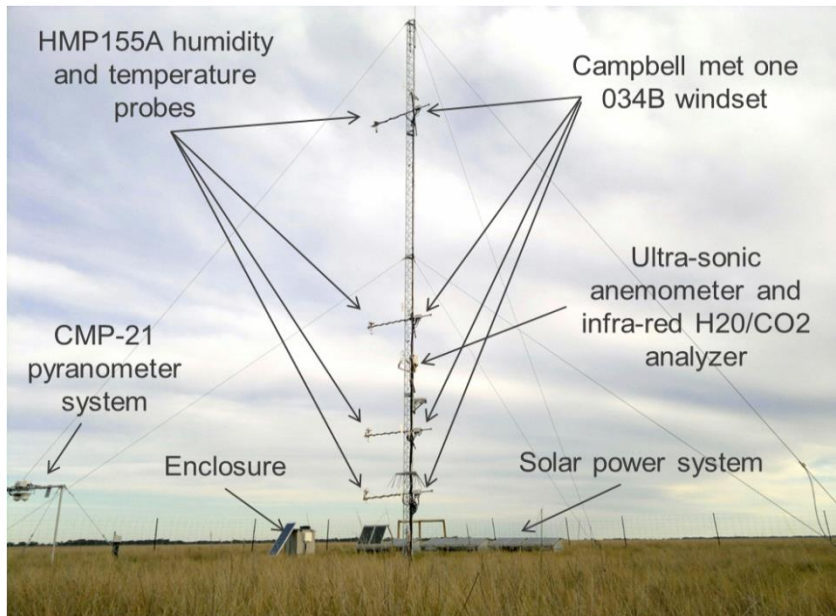

Polarisations: VV, VH, HV and HH

Resolution: ~10m

Inc. angles  $15^\circ$  -  $45^\circ$  on both sides of aircraft

Antenna type:  $2 \times 2$  patch array

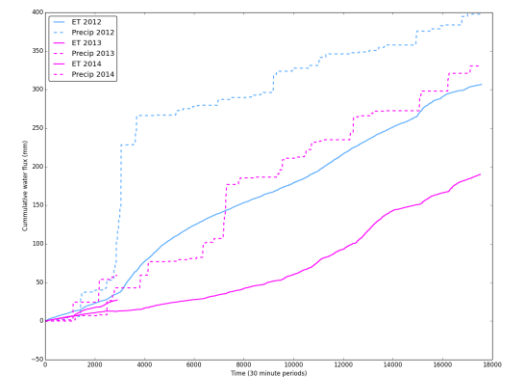

# 1. Install JAXA Flux Tower & Weather Stn

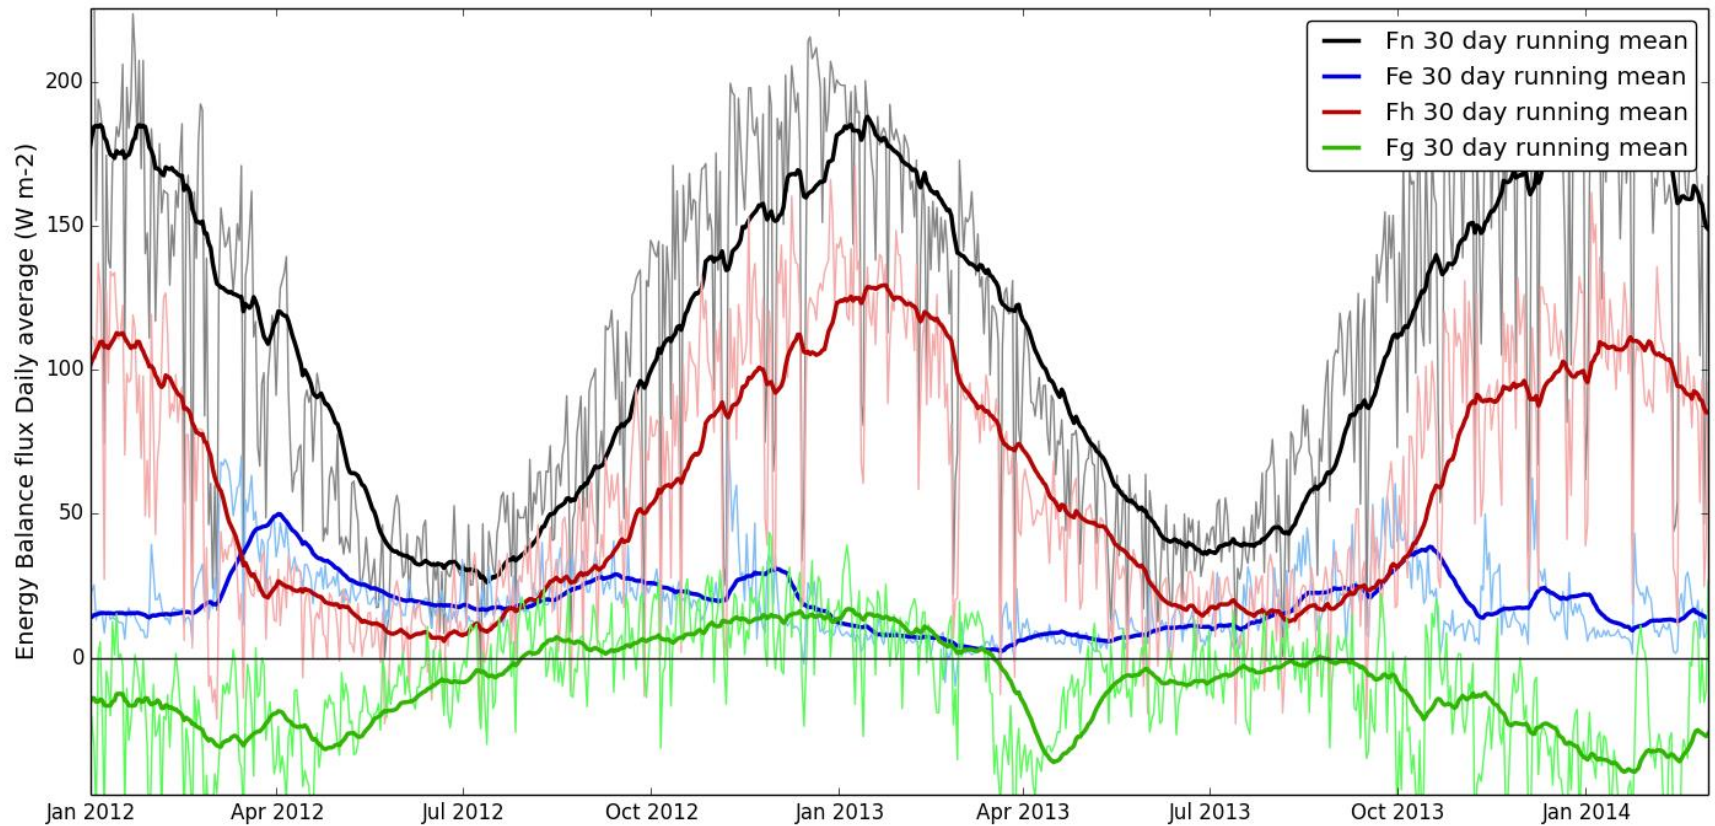

<http://www.arts.monash.edu.au/ges/research/climate/jaxa/>

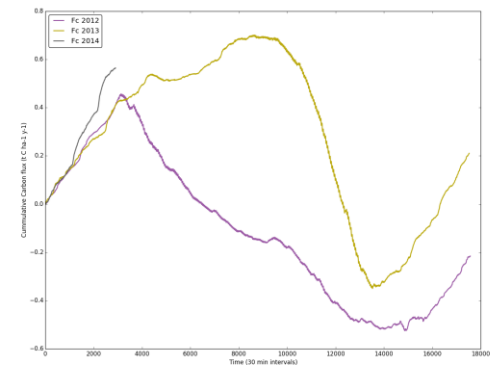

Operational since June 2012

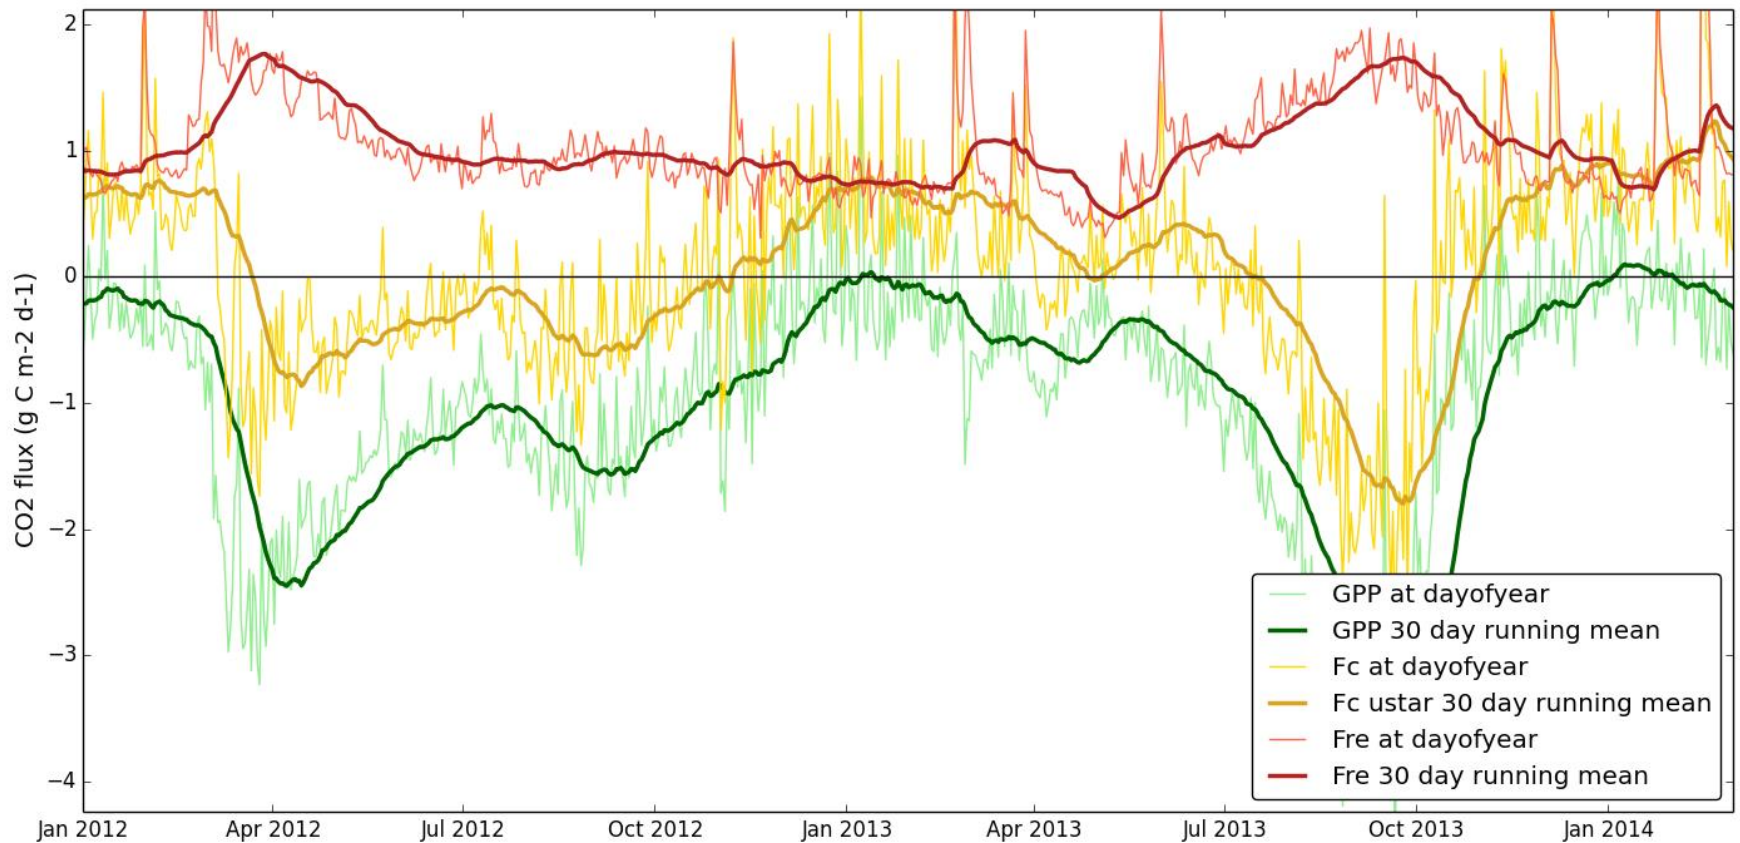

## Timeseries EB plot for Yanco\_JAXA freq dayofyear\_v12

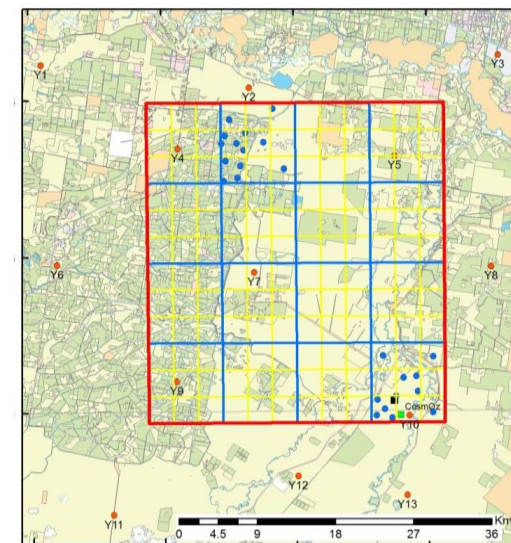

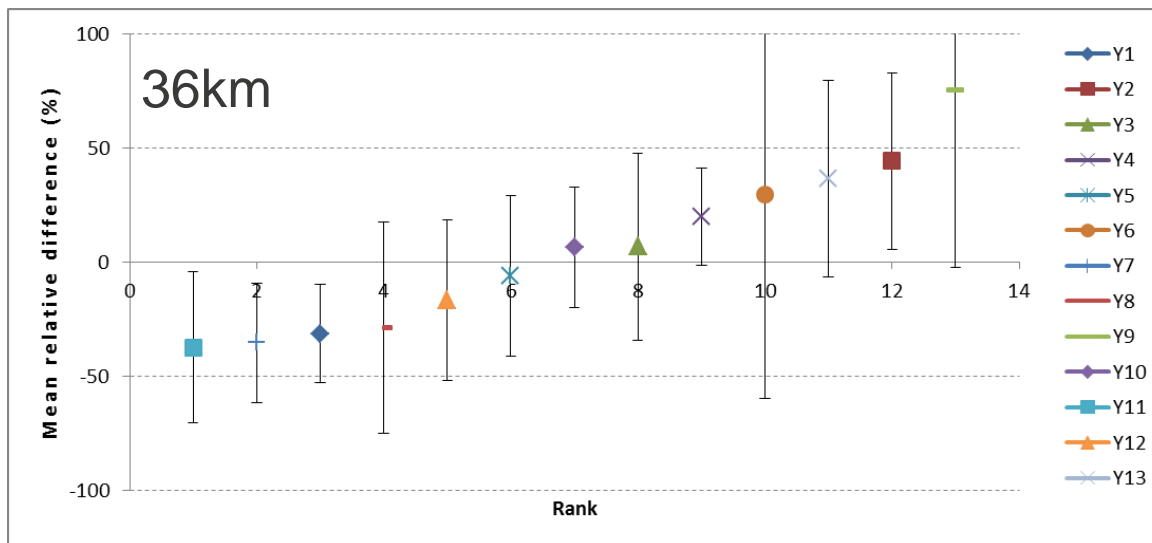

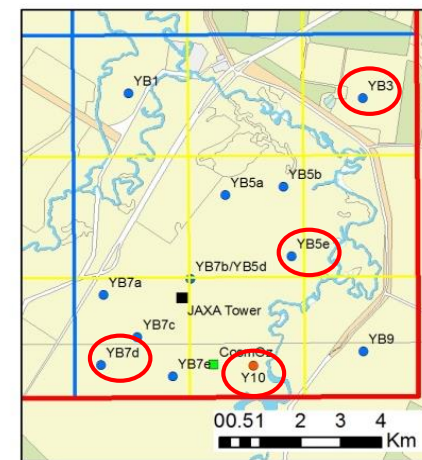

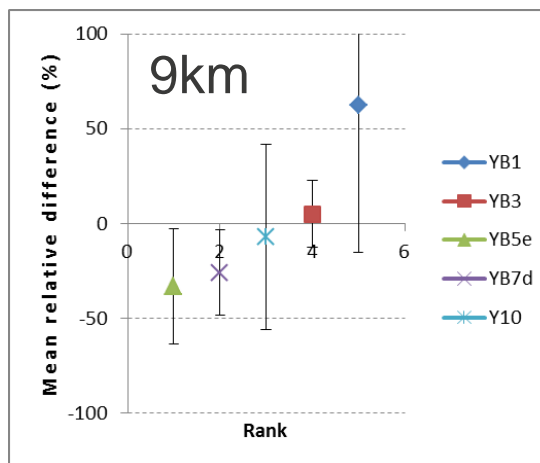

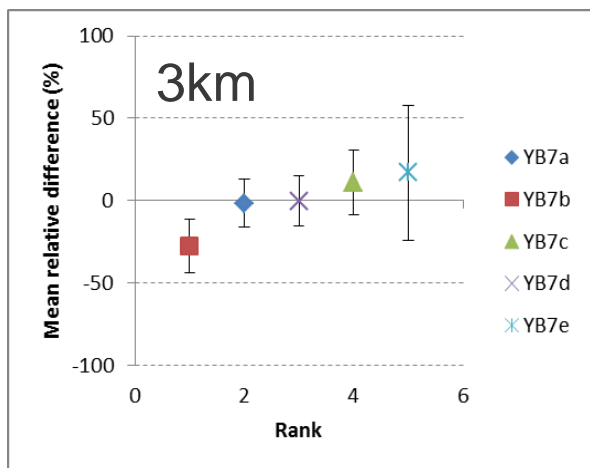

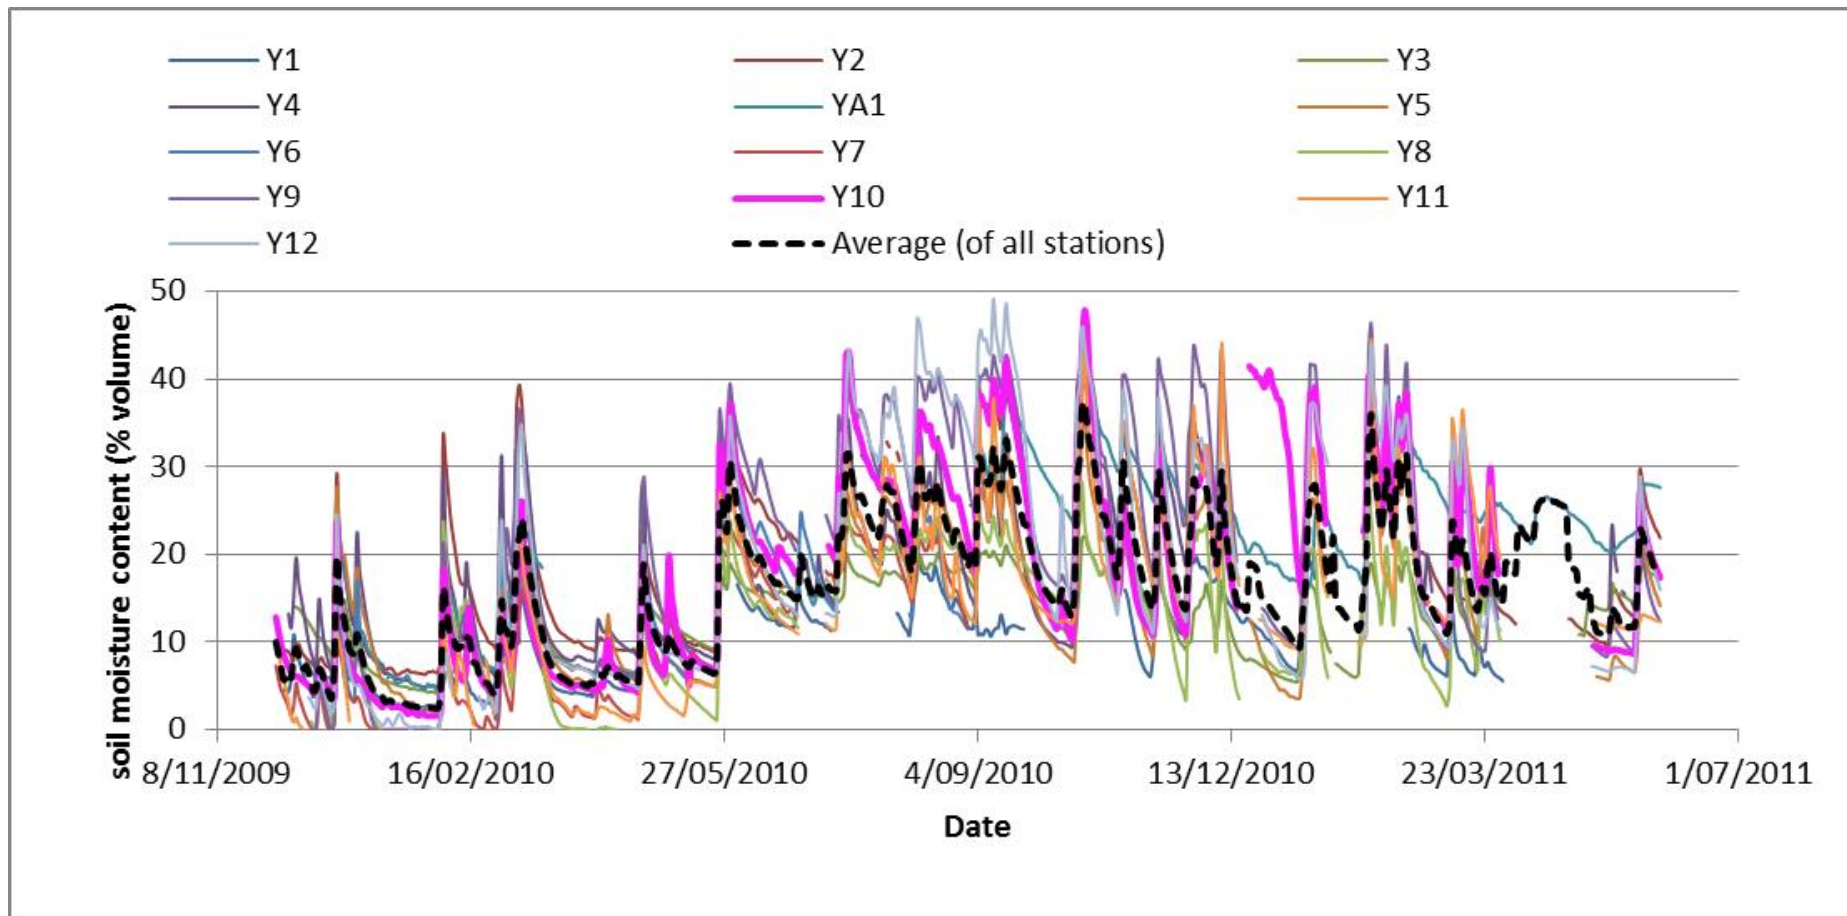

Timeseries Carbon plot for Yanco\_JAXA freq dayofyear\_v12

## 2. Understand the Point-to-Pixel Scaling

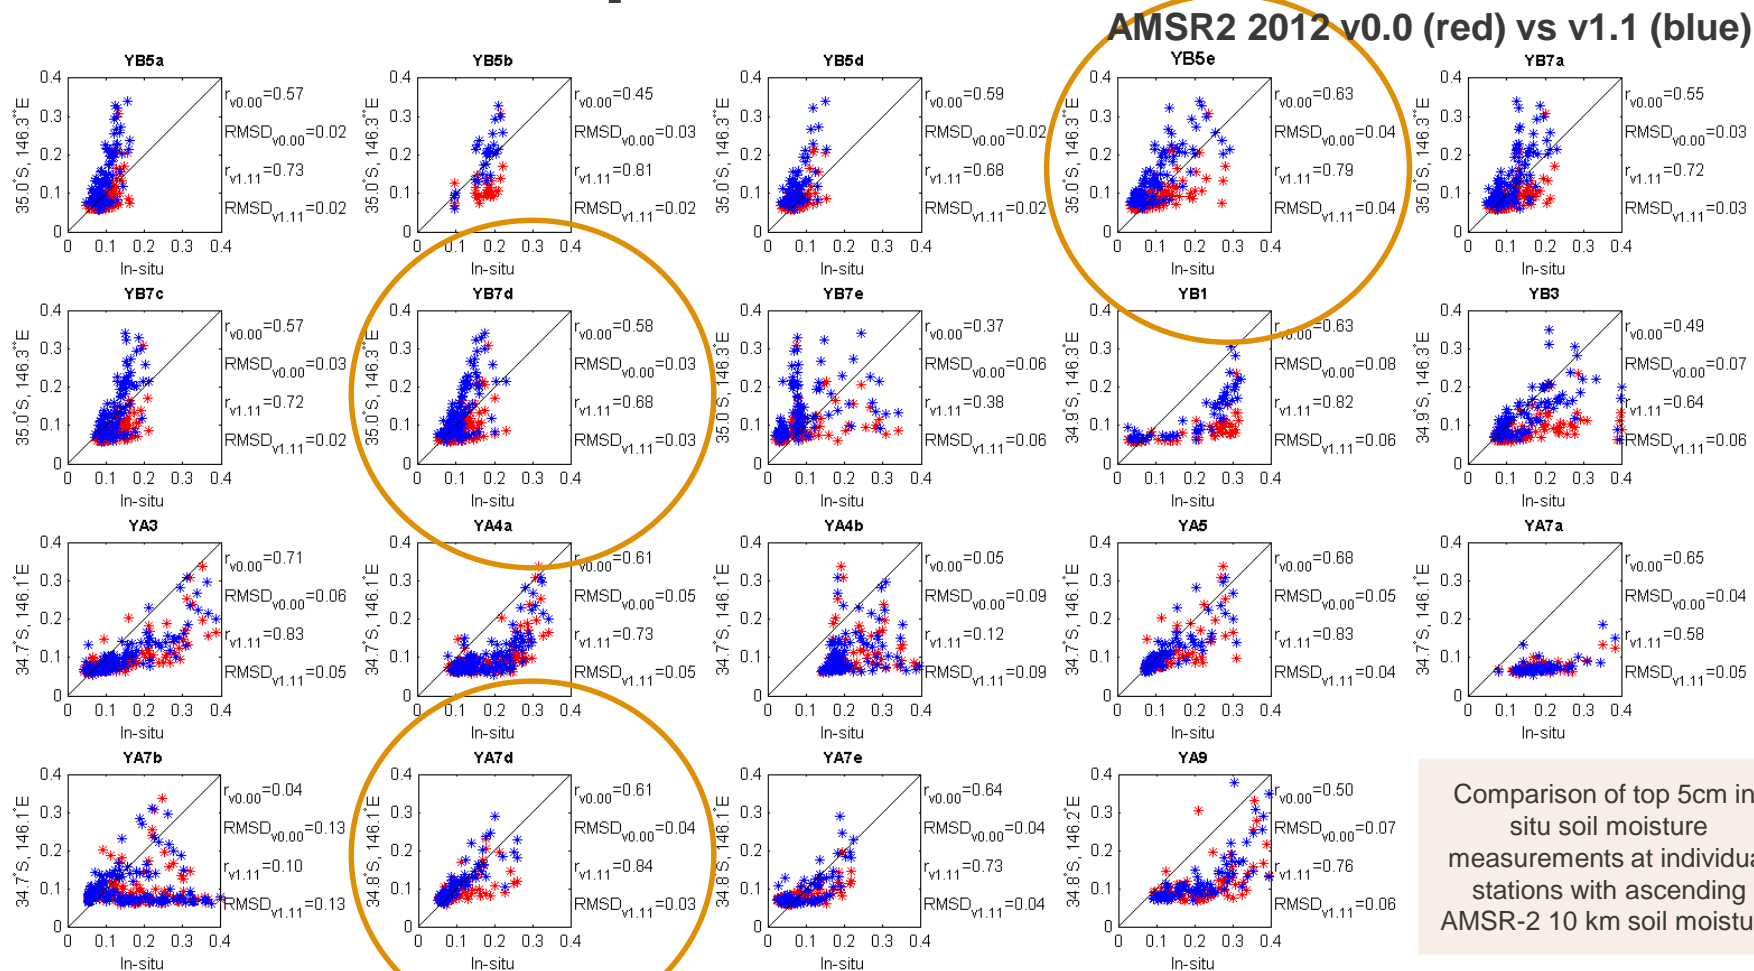

## 2. Understand the Point-to-Pixel Scaling

### 3. Validation of Derived SM and Fluxes

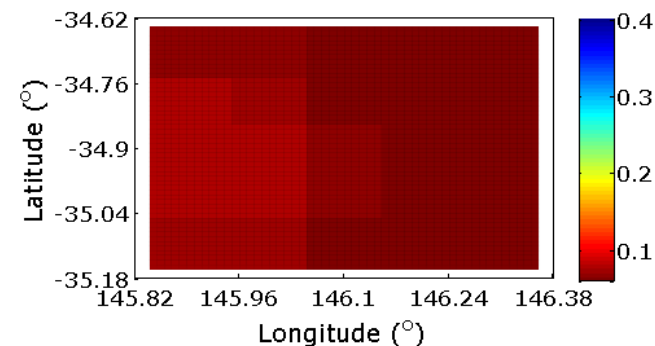

#### Legend

- ▲ SMAPEX stations
- OzNet stations
- MODIS 1km Grids
- 10km AMSR2 Grids
- Surface Soil Texture
  - Sand
  - Sandy Loam
  - Loam

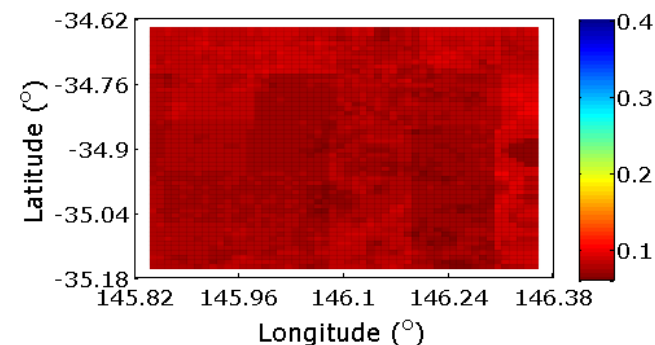

### 3. Validation of Derived SM and Fluxes

**AMSR2 – level 3**

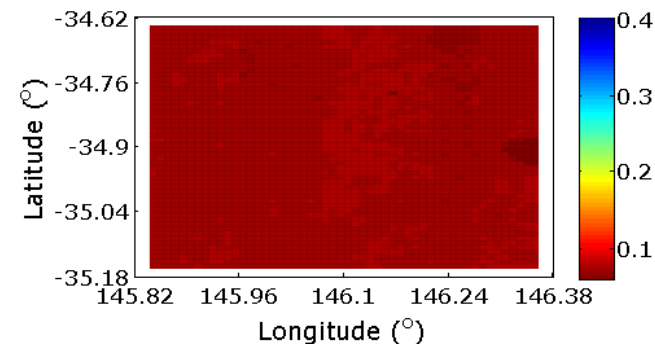

**Soil Moisture in the  
Yanco area on  
23 July, 2012**

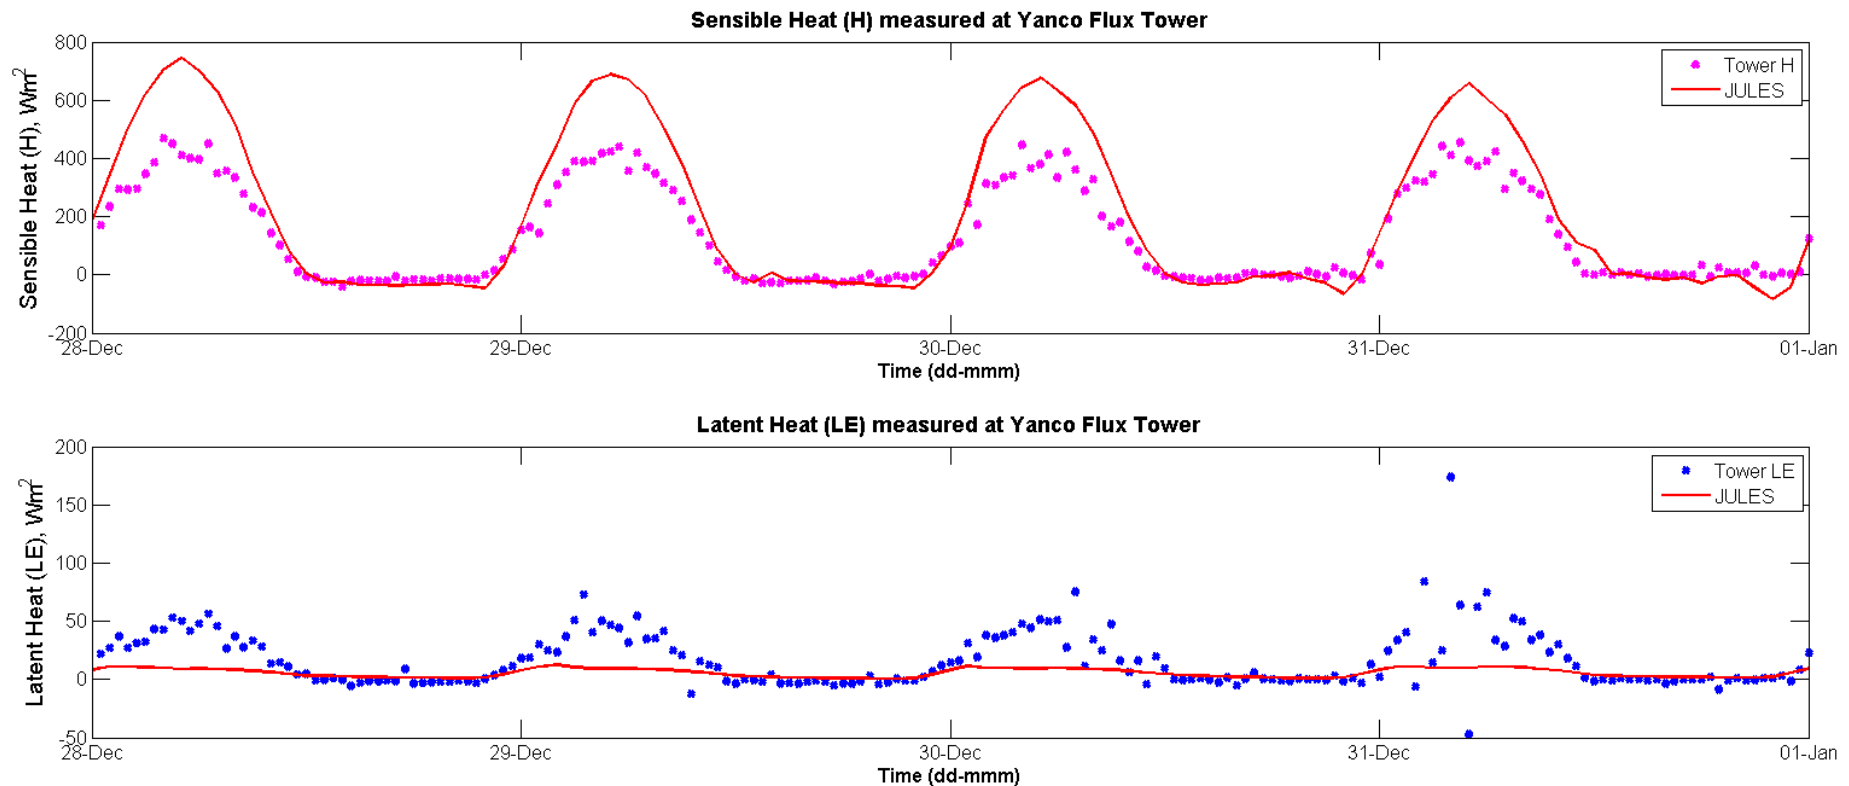

**Model estimate**

**Updated - EnKF**

### 3. Validation of Derived SM and Fluxes

# Future Work

- Develop/refine upscaling methodology
- Conduct AMSR2 validation for longer period/more diverse conditions as time progresses,
- Comparison/validation of downscaled products as made available
- Better understanding of model and its “biases”
- Assimilation of validated AMSR2 SM products into JULES to improve simulation of heat fluxes.
